

Partner Application Services (PAS)

An extension of Delta Controls, as part of your project team

Our world is changing

Partner Application Services is a key strategic initiative for the Delta Controls family. Along with the integration tools and platforms, Delta Partners no longer have to say no when a client needs to differentiate themselves. We dare our end users to think differently and not compromise with off-the-shelf solutions.

Work with the experts

The Partner Application Services team is comprised of a diverse group of individuals, each with their own expertise. We have the skills required from graphics design and system integration to low level programming. Each Engineering Service Specialist has direct access to the designers and developers within Delta - enabling them to go right to the source of the system.

Leverage our experience

Since its inception, PAS has worked with the Delta partnership to complete many projects, large and small. Whether you are looking for some assistance with a new product you have not used before, or just need a hand getting some last minute work completed on schedule, Partner Application Services is the solution.

eZNS Configurator - www.ezns.eu

Self build design tool

eZNS Configurator offers a wide range of function buttons, housing colours, RGB backlight, NFC applications and selection of sensors: temperature, CO2, motion. The functionality of each room can be mapped by each individual eZNS.

enteliWEB, enteliVIZ, CopperCube - configuration

Construction of advanced graphics, including: control devices, floor temperature map, AHU direct ventilation areas, devices location, IP architecturs and others.

Energy Analytics

- 6 6 Call

Energy Analytics will help you achieve operational savings and energy efficiency, giving you data to manage your building proactively.

Complex projects
